Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

### ***Priority***

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

### ***Claim Rejections - 35 USC § 112***

Claims 1-6,13-18,20 and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1,

It is not clear within the claim language how applicant has determined or considers a concentration to be high.

Regarding claim 1,13 and 20,

Applicant has failed to define N within the claim language thereby the claim is indefinite.

Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See

Art Unit: 2828

MPEP § 2172.01. The omitted structural cooperative relationships are: the mixed crystal that does not include N, applicant has failed to structurally relate the crystals.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6,13-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okumura (PN 6,456,640) in view of Kidoguchi et al (PN 6,118,800).

Okumura illustrates in figure 12 a conventional self-pulsating laser device having a substrate (221), a cladding layer (223), an active layer (224), a cladding layer (225) and a saturable absorber layer (226) made of InGaN as described in column 1 lines 53-63.

Okumura is silent as to the band gap of the saturable absorber.

Kidoguchi et al illustrates in figure 11 a self-pulsating laser device, which includes among the layers a saturable absorber layer (1005) having a band gap smaller than that of the active layer, as described in column 2 lines 34-38. Figure 8 illustrates layer (707) interposed between the cladding layer and a saturable absorber layer as described in column 9 lines 43-64.

Therefore, it would have been obvious to a person of ordinary skill at the time the invention was made to provide the saturable absorber layer of Okumura with a band

gap smaller than the active layer band gap because it would improve the operation of the laser as suggested by Kidoguchi et al.
